Inground version	13.255 + 44.731	4.000 Kg.	800 Kg.	–	230/400 V./50Hz/ 3 ph

FDS: Fulcro Drive System

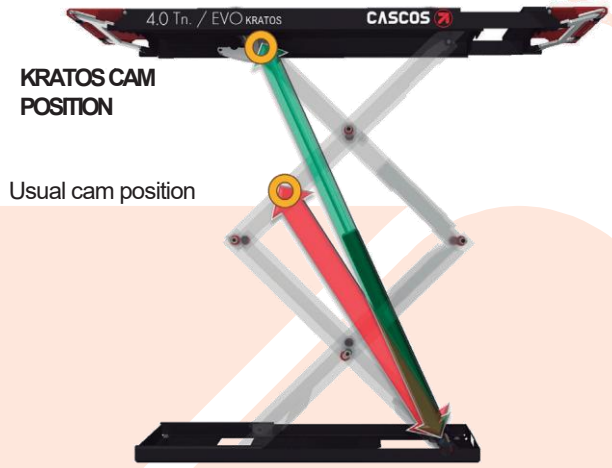

Thanks to our cam, which allows transferring propulsion to upper platform **(FDS),** as well as to the use of direct –push cylinders operating from the frame **(OPS),** we have reduced the tension applied on the scissors. This makes posible lifting up to 4 tons as well as a much longer life cycle.This **NEW FDS SYSTEM** enhances the control of the descent **(SCD),** ensuring a smooth, silent descent of the platforms in the last stretch.

SCD System

Sistema **C**ontrolado de **D**escenso

OPS System

Optimal **P**ushing **S**ystem

Maximal length =

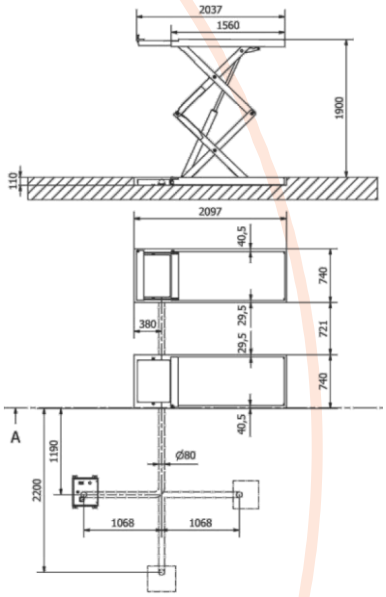

2.037 mm

Great max. height:

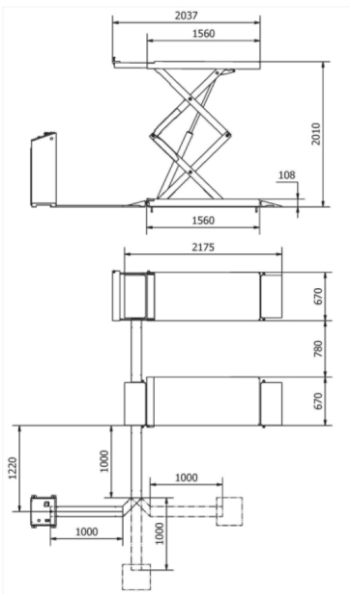

2.010 mm

Amongst highest scissor lifts in market
